

# 1 Using the Text Text Link Editor

To create a link between fragments of XML documents, the following steps have to be done:

1. Click on  in the menu bar to create a new item of the kind "Text-Text-Link Object".
2. To do this, a project has to be selected and metadata have to be added.
3. After the Text Text Link Editor has opened, double-click the relevant XML documents.
4. The selected XML documents will be shown in different parallel columns.
5. Select a text fragment from one XML document and click "New" to create a new link.
6. Select another text fragment and click "Add" to subsume it to a selected link. The currently selected link is written in italics.
7. You can click on the "C" between brackets in front of the link to choose a color for all fragments of this link.
8. You can click in the Annotator field and add a commentary to the selected link.
