

1 User Management View

When a new Project has been created, Project users can be added and roles can be assigned to them. To be selected users must previously have logged into TextGridLab at least once.

There are four possible roles for users in TextGrid and every role has specified rights:

Project Manager	delegate, create rights for Projects; delegate, publish rights for resources
Authority to Delete	delete rights for resources
Editor	read, write permission for resources
Observer	read only rights for resources

	Project Rights	Resource Rights
Delegate	edit the user/role assignment for the Project	modify rights for the resource
Publish		publish a resource. The resource will be then world-readable and cannot be deleted or updated any longer
Delete		delete unpublished resources
Create	Create new Projects	create new resources in the Project
Write		write (i.e. update) unpublished resources
Read		read resources in the Project

Rights in TextGrid are non-hierarchical. If users are meant to have full rights, the roles "Project Manager", "Authority to Delete" and "Editor" must be assigned to them. Roles with their respective rights can be withdrawn from users by those with the authority to do so.
